

CALEB BOGALE WORKU

Software Engineer | Backend Developer

CONTACT DETAIL

Bole district House Number
795/366 Addis Ababa, Ethiopia

PROFILE INFO

Sex: Male
Marital status: Single
Date of Birth: March 4/1990
Place of birth: Addis Ababa,
Ethiopia

OBJECTIVE

Build an interactive application that enables company to compete with rivals with the aid of new technology.

EXPERIENCE

SOFTWARE DEVELOPER • ETHIOPIAN PEDIATRICS SOCIETY • JULY 13 – NOV 14

I designed and developed a comprehensive web solution that integrates a mini portal system, a web-based game, and a Google Chrome application. The website offers a variety of functionalities to enhance user engagement, including online registration, search engine, feedback/contact form, chat functionality, photo/video gallery, journals section, discussion forum, animation section, social networking features, advertisement capabilities, and translation services. Additionally, I implemented a custom Google Maps integration with GPS functionality.

I am also responsible for the administration and maintenance of the website's content management system (CMS), which empowers authorized users to manage content and address any technical issues related to the society's computers. The CMS also features a membership management system that tracks member statuses and automatically transitions expired memberships after a year of inactivity.

Furthermore, I designed and implemented an eLearning system that delivers notifications to users about available exams for each course. These exams are delivered in a multiple-choice format and are auto-graded upon submission, providing users with immediate feedback on their performance. Upon successful completion of all exams, the system automatically generates certificates for the users.

SKILLS

Programming Language

- JavaScript, Golang,
Python, PHP, Java,
WordPress

Web-Frameworks:

-Express.js
-ReactJS
-flask

Database

-MySQL
-MongoDB
-Postgres

API-Development:

-RESTful-API's

API-DOCUMENTATION

-Swagger
- Postman

Version-Control: GIT

Cloud-Platform:

-Digital-Ocean
-Linux Server

ICT OFFICER • INTERNATIONAL LEADERSHIP INSTITUTE • SEPT 2014

- NOV 2015

Updated the website of the International Leadership Institute and implemented several features, including an Online Registration System. Additionally, I developed a web-based digital Library system enabling students to access resources remotely.

Furthermore, I designed an Employee registration system for the Human Resource management Department of the International Leadership Institute. Additionally, I am responsible for the development and upkeep of various functionalities such as Online Registration, Search engine, Feedback/Contact, Chat, photo/video Gallery, Journals site, Discussion Forum site, Animation site, Social Network site, Advertisement site, and Translation site.

Moreover, I oversee the maintenance of the ADMINISTRATORS site (Content Management System) and provide technical support for computer-related issues within the institution.

Software Engineer | Backend Developer

WEBSITE DEVELOPER AND MANAGER • ETHIOPIAN PUBLIC LABORATORY HEALTH ASSOCIATION • MAY 2014 - JULY 2015

developed a dynamic integrated website for The Ethiopian Public Health Laboratory Association (<http://www.etphla.org>), featuring a web-based application for all EPHLA members to upload their CVs whenever there's a job vacancy posted on the site. Additionally, applicants can directly upload manuscripts via the web app for consideration in the annual conference journal posts.

Security measures are in place to ensure encrypted communication between the uploader and the web Admin manager when uploading CVs and manuscripts.

Furthermore, I implemented an automated system for membership applications within the association. This system includes a countdown mechanism, reminding members to renew their membership within 30 days of expiration. Upon membership expiration, individuals lose access to various functionalities within the web application, including manuscript and CV uploads, as well as the ability to participate in discussion forums.

Software Engineer | Backend Developer

IT PROFESSIONAL • KIYA TRANSPORT PLC • SEPT 2016 – June 2019

Developed server-side software facilitating resource sharing across all departments via a centralized server system. This software streamlined operations, enabling the management team to make more informed decisions efficiently. As the company primarily operated in transportation services, often collaborating with SALINI-IMPERGILO, this system proved particularly valuable.

Constructed an automated software system to track and display the performance of each truck throughout the month, employing color-coded indicators. This tool enables the management team to swiftly assess whether a truck should be retained, sold, or requires further evaluation, including driver assessment.

Software Engineer | Backend Developer

SOFTWARE DEVELOPEMENT • GREENPATH

I stood out among the applicants and was selected as the top candidate for the programmer analyst position within the organization. During the interview process, I was tasked with developing software for analysis purposes. Given raw data, I transformed it into meaningful information, enhancing the organization's decision-making capabilities by providing actionable insights.

Subsequently, I created software capable of generating analysis reports for the organization's partners. This tool effectively identifies profitable partners and those with lower performance, presenting the data through intuitive bar and pie charts for simplified decision-making and reporting.

SOFTWARE DEVELOPEMENT • Fleet Management System

I freelanced for an organization specializing in freight transport services. The software I developed offers comprehensive functionalities aimed at streamlining vehicle route management for transport management teams. It incorporates a GPS tracking system and facilitates vehicle management tasks including fuel and tire management, driver oversight, and reminder scheduling.

This software effectively addresses key concerns for company owners by efficiently managing fuel and tire-related matters. It processes, analyzes, and reports on driver statuses, enabling comparisons between drivers and vehicles to distinguish between effective and subpar performance.

CALEB BOGALE WORKU

Software Engineer | Backend Developer

Consultant • Aplenty from October 1, 2019 – November 1, 2019

I entered into a one-month contract with Aplenty, where I assumed the role of a trainer. My responsibility involved delivering training sessions to government offices on a software developed by Pyramid Tech Solution, headquartered in India. This software, an E-Office solution, aimed to centralize all office operations within a digital platform, minimizing paperwork and enabling seamless communication and task completion for employees. Specifically, I conducted training sessions to familiarize employees from government institutions such as the Ministry of Finance (MOFEC) and the Ministry of Trade (MOT) with the functionalities and operation of the system.

IT Specialist • Yewubdar Gebeyehu G.C from February 1, 2020 – April 1, 2020

- Transitioning all secretariat tasks to an automated system
- Integrating a fleet management system within the office
- Creating a stock management system
- Establishing a machinery status monitoring system
- Providing support for the installation of GPS tracking devices
- Constructing a Human Resource Employee leave Form Management system

Software Development • Free • Covid-19 Analytics in Ethiopia

Developed with the primary objective of facilitating information retrieval and analysis. This software systematically dissects recorded data, transforming it into easily comprehensible information through the utilization of visually informative charts and graphs.

CALEB BOGALE WORKU

Software Engineer | Backend Developer

Backend Developer • CDI24 and CDIWork (Jan 01, 2023 – Present)

As a backend developer proficient in Node.js Express, I crafted an exceptional application where I meticulously designed a robust RESTful API to seamlessly connect with frontend development. Ensuring clarity and accessibility, I diligently documented the API using Swagger documentation. Additionally, I seamlessly transitioned into a DevOps role, configuring and deploying servers to optimize performance and reliability throughout the development process.

In addition to my core backend development tasks, I seamlessly integrated a payment system to facilitate transactions within the application. Furthermore, I orchestrated the integration of the Telegram API for strategic marketing initiatives, enhancing client engagement and outreach efforts. You can see my work on <https://cdi24.com> and <https://cdiwork.com>

PERSONAL STATEMENT

I graduated with a degree in Information Systems and obtained a website development certificate from Color Zone Advertisement and Masters degree in Computer Science. Throughout my career, I have consistently implemented digital systems, transitioning workplaces from manual to digital processes. My overarching objective is to propel companies into the digital age, ensuring competitive advantage and secure data storage and backup capabilities.

My focus lies in developing software solutions that not only record data but also gather, analyze, and present it in comprehensive reports for efficient decision-making. I strive to make all resources easily accessible and searchable for office secretariats, facilitating streamlined operations across all departments.
